MANUFACTURING

CHEMICAL FREE
15 PSI CLEAN STEAM BOILER

H SERIES

- No Water Chemical Treatment Required
- No Boiler Feed Equipment Required
- Low Total Cost of Ownership (TCO)
- Completely Non Ferrous Interior
- Direct Feed with Potable Water
- Inject Steam Directly Into Process
- Increased System Efficiency
- Proven Durability Since 1931

DURABLE

RELIABLE

PROVEN

*"Industrial Boiler Equipment Design and Manufacturing Excellence for over 80 years.
Proudly Made in Danville, Kentucky, USA."*

WHY SELLERS H-SERIES?

Universal Problem

Oxygen in potable water causes corrosion failure in a typical fire tube steam boiler making chemical treatment & expensive oxygen removal necessary.

The *Sellers* Advantage

The exclusive boiler design allows the use of copper tubes and epoxy phenolic lining to create a completely nonferrous boiler. This same design allows direct feeding of untreated potable water.

H-Series Applications

Any 15 psi steam process wishing to reduce Capital Expenditures and water treatment cost!

Some examples are: Food & Beverage Processing, Sterilization & Humidification.

Trust a Proven Technology

Since 1931 the exclusive Sellers design has provided a remarkably durable water heater with thousands of successful installations. This same technology is now being applied to the H-Series clean steam boiler.
